

Press Release & Product Specification

Steel Molecular Coaster

DesignedMade is proud to announce the launch of its latest collection, the Steel Molecular range.

The Steel Molecular range applies DesignedMade's signature graphic style to the molecular structure of steel, resulting in a pattern that is both decorative and informative.

The pattern, which represents the combination of iron and carbon atoms that make up the material itself, lends the pieces an educational function in addition to their primary purpose.

DesignedMade worked closely with the buying team at the Science Museum shop to develop the products.
